Fighting for the Best and Preparing for the Worst

When the old rules collapse, survival depends on preparation. Welcome to our underground ledger for resistance.

PROLOGUE

The ARP Diaries of London

When the bombs fell on London, there wasn't time to wait for Churchill to issue instructions, or for some ministry to print neat pamphlets. Ordinary people had to keep track of the chaos themselves. They carried little black notebooks—what they called ARP diaries.

Inside were hand-scribbled maps of air raid shelters, the names of neighbors who could be counted on, and the locations of shops that still had bread after a night of fire. One entry might read: Mrs. Harris at Number 12 has extra blankets. Another: Milk at Brixton, if you queue early.

These weren't official records. They weren't sanctioned by the government. They were survival guides, written in the margins of everyday life. And they mattered because they were practical. They made the difference between a hungry child and a fed one, between a night on cold concrete and a night under borrowed wool.

This is what people do under pressure: they write down what matters, they share it, and they pass it along. That's the spirit behind our Doomsday Book.

Let's Write Our Own

What Was the Doomsday Book?

In 1086, William the Conqueror ordered a vast survey of England. The Doomsday Book (or Domesday) was a vast inventory of the people. It recorded every field, cow, mill, and household so the king knew exactly what he owned (and what he could tax).

Ever since, people under pressure have made their own ledgers—not for kings, but for survival. Medieval monks tallied cattle and plows. Dissidents in Soviet Prague passed around samizdat notebooks. Under apartheid, activists kept “little black books” of safe contacts, trusted couriers, and secret kitchens where plans were made.

We need one now.

Our Doomsday Book is a ledger of survival and resistance tools and resources. Like the ARP diaries in wartime London, the samizdat notebooks, and the little black books, it records what we can hold, share, and use together when power turns hostile.

This is our Doomsday Book—a living ledger of how ordinary Americans can survive in extraordinary times. Not just endure, but resist, outlast, and prepare to rebuild.

And don't mistake this for doomscrolling. This isn't despair—it's strategy. Because if history has taught us anything, it's this: those who prepare for the worst end up strengthening their fight for the best.

Here's what's in this 5-chapter fieldguide:

- Information Security—keeping your data, identity, and plans safe.
- Community Resilience—building trust circles and mutual aid.
- Underground Economy—barter, skills, and shadow markets.
- Exit Routes & Safe Havens—planning to move yourself or a neighbor.
- Psychological Armor—resisting fear, cultivating hope.

Add Your Page to the Ledger

What's one thing you've done—or plan to do—to prepare for uncertain times? Maybe it's practical, maybe it's symbolic, maybe it's just a mindset shift. The Doomsday Book isn't mine alone—it's ours, written by all of us, one page at a time.

We begin with the first wall of defense: Information Security.

Let's write this book together.

—*Lady Libertie*

Chapter 1

INFORMATION SECURITY—THE FIRST WALL OF DEFENSE

Authoritarians thrive on surveillance. Here's how to keep your conversations, files, and digital trail safe.

Lessons from History: The Stasi Files

The East German Stasi collapsed in 1989, and citizens stormed the archives. What they found was chilling: entire lives catalogued in floor-to-ceiling files—conversations transcribed, friendships mapped, dissent crushed with precision.

Our edge today is that we know what they're after, and how they're trying to get it. We've seen it before. The lesson is clear: don't hand your life over in tidy digital files. Make them work for it.

Every authoritarian regime begins with surveillance. Before the arrests, before the censorship, before the jackboots—there's the watching. Who you talk to. What you read. Where you go.

The Stasi in East Germany kept sprawling files on millions of ordinary citizens. Today's authoritarians don't need basement filing cabinets. They have tech platforms. They have phone carriers. They have the data we give away every time we log on without thinking.

That's why our first wall of defense is information security. Because if they can't see you clearly, they can't stop you easily.

Step One: Lock Down Your Communications

- Use encrypted messaging. Signal and Session are the gold standards—free, open-source, and built for privacy. (signal.org)
- Ditch SMS for sensitive talk. Texts sit on carrier servers indefinitely and can be subpoenaed. Instead, move sensitive conversations to Signal or Session, which are end-to-end encrypted and leave no records with your phone company. (getsession.org)
- Use disappearing messages wisely. On apps like Signal, set messages to auto-delete after a few hours or days. This limits what can be seized if your phone is taken.
- Remember, disappearing doesn't stop screenshots—only share in circles you trust completely.

Step Two: Guard Your Digital Identity

Your accounts are the keys to your life—email, banking, messaging, even your grocery delivery. If someone cracks one, they can often pivot to the rest. Guarding your digital identity isn't about paranoia; it's about not handing the regime—or a garden-variety hacker—the master key to your world.

- A password alone is flimsy—databases leak, phishing tricks work, and brute force can crack weak ones. Two

factor authentication (2FA) adds a second lock: even with your password, an attacker can't get in without the code. (authy.com, getaegis.app)

- Separate emails for separate roles. Use one account for activism, another for personal. Don't cross the streams!
- Password Managers. Stop juggling scraps of paper or reusing the same weak login everywhere. A manager like Bitwarden or 1Password generates strong, unique passwords for every account and stores them securely. You only need to remember one master password—one password to rule them all. (bitwarden.com, 1password.com)

Step Three: Control Your Metadata

It's not just what you say that gives you away—it's the trail around it. Metadata is the who, when, and where of your digital life: location tags on photos, timestamps on messages, the IP address you logged in from.

Authoritarians don't need to read your words if they can map your movements. Controlling metadata means cutting off those easy clues.

- Turn off location services unless you absolutely need them. Your phone is a tracker in your pocket. Every app that pings your location leaves a breadcrumb trail—where you sleep, where you shop, who you meet.

Most of the time, apps don't need it. Go into your phone's settings and switch location to "Only while using" or "Never" for anything non-essential. Keep it on only for maps or emergency tools.

- Strip metadata from photos before sharing (apps like ExifCleaner do this in one click).
- VPNs mask your browsing, but only use trusted providers (ProtonVPN, Mullvad). Free VPNs are honey traps.

Step Four: Keep an Offline Backup

Authoritarians love the delete button. The internet goes dark, accounts vanish, evidence gets wiped. Don't let your resistance live only online.

- Print out critical documents. (I know, I know, who has a printer anymore. But find a Boomer buddy with a printer and they can be your resistance-squad's librarian.)
- Save contacts and notes on paper. Here's your chance to use all those pretty little empty books you've been collecting.
- Keep a USB drive with encrypted backups. Then hide it in an old phone case, empty vitamin bottle, or hollowed-out book. Or taped under a drawer or inside couch lining where you won't forget it.

Chapter 2:

COMMUNITY RESILIENCE — BUILDING CIRCLES THAT HOLD

Practical steps for building networks that endure when systems fail.

Lessons from History: The Kitchen Table Network

In apartheid South Africa, much of the visible resistance—marches, strikes, speeches—was led by men. But when those men were jailed, exiled, or silenced, it was often women who kept the movement alive.

They turned kitchens into command centers, gathering trusted friends over tea to plan the next leaflet drop or boycott. They tucked mimeographed flyers into laundry baskets, slipped messages into schoolbooks, and carried food parcels to families suddenly without fathers. Networks of mothers, sisters, and grandmothers passed news along like a heartbeat, quiet but steady, sustaining communities that the regime tried to break.

Their work rarely made headlines, but it made survival possible. Resilience didn't always look like defiance in the streets—it often sounded like pots clanging, children laughing, and neighbors sitting shoulder-to-shoulder at a kitchen table, plotting a freer tomorrow.

Why Start with People?

Authoritarianism feeds on isolation. If you're scared, alone, and scrambling, you're easy to control. But when people knit themselves into circles of trust—checking on one another, sharing resources, passing messages—regimes falter.

History proves it: the Polish Solidarity movement thrived not just in shipyards, but in living rooms, churches,

and kitchens. Black mutual aid networks in the Jim Crow South kept whole communities alive when the state refused. In every struggle, survival has come down to people holding people.

Step One: Start Small, Start Close

You don't need a hundred people and a logo. Resilient networks grow from a handful of folks you already trust—family, friends, neighbors. One strong tie is better than ten flimsy ones.

- Exchange contact info both ways. Write down phone numbers and addresses on paper, not just in your phone. Make sure at least two people in your circle know how to reach each other if the grid goes down.
- Map your basics. Who has a generator? Who knows first aid? Who has extra food or tools? Who can drive at night if someone needs to move quickly? Write it down so no one has to guess in an emergency.
- Practice with something small. Start with a low-stakes task: water each other's plants, swap babysitting, or keep watch on a house when someone's away. These "drills" build habits of trust and reliability—without the pressure of a crisis.

Small circles tested in ordinary times become strong circles in extraordinary ones.

Step Two: Build a Mutual Aid Line

Think of mutual aid as insurance—but powered by people, not premiums. Instead of waiting for help from a system that may fail you, you and your circle become the safety net for one another.

- Make a skills and resources map. Write down who can cook, who can repair, who has medical know-how, who owns a truck or tools. A simple spreadsheet—or even a notebook—can reveal surprising strengths in your group.
- Pool basics. Build a shared stash: first-aid kits, spare cash, phone chargers, gas cards, shelf-stable food. Each person adds a little, and together it becomes enough.
- Rotate help. Share the load in everyday life: one person picks up groceries this week, another runs childcare next week. Practicing rotation now makes it second nature when things get harder.
- Decide how you'll communicate. Have one agreed-upon way to alert each other when someone needs help—whether that's a group chat, a phone tree, or a weekly check-in.

Mutual aid isn't charity. It's solidarity—neighbors standing shoulder-to-shoulder so no one gets left behind.

Step Three: Create Trusted Channels

Whispers matter more than headlines. Information shared quietly within your circle can be safer and more useful than anything blasted on social media. The goal is simple: make sure your people know how to reach each other when normal channels fail.

- Pick one secure app for sensitive updates—Signal or Session are solid options. Everyone in your circle should download and practice using it before it's urgent.
- Choose one offline fallback. This could be a physical bulletin board, a weekly in-person meet-up, or even a hidden “dead drop” spot (like a hollow tree or taped envelope behind a utility pole) where notes can be left if the grid is down.
- Write down the plan. Every member of the circle should have the fallback method in writing—taped inside a notebook or folded into a wallet—so it doesn't get forgotten in a panic.
- Test it once. Run a drill. Turn off your phones for a day and see if your fallback system actually works. Adjust it before you need it.

A trusted channel doesn't need to be flashy. It needs to be reliable.

Step Four: Plan for Stress Before Stress Hits

Circles don't usually break because of outside pressure—they break because no one agreed on what to do before the pressure came. Decide now, while things are calm, so you're not scrambling later.

- Assign roles for emergencies. If someone is arrested, who calls the lawyer? Who contacts family? Write it down so there's no confusion.
- Cover everyday obligations. If a member has to lay low or disappears for a while, who feeds their pets, pays their bills, or checks their mail? These small details keep lives intact until they return.
- Plan for compromise. If one person's phone is hacked or their home searched, how does the group protect the rest? Agree on signals for "go dark," and practice what it means to cut contact safely.
- Document quietly. Keep a simple written plan—sealed envelope, hidden note—that everyone knows exists but only opens in need.

Strong circles bend under stress—they don't shatter.

Chapter 3:

THE UNDERGROUND ECONOMY — TRADING IN HARD TIMES

From barter to black markets—the quiet engines of survival.

Cigarettes, Bread, and Razor Blades

In postwar Germany, Reichsmarks were useless. Inflation had gutted the currency, but people still needed to eat. What saved them wasn't the banks—it was barter. Cigarettes became the standard of exchange. A carton could buy you a suit, a pack might cover a doctor's visit, and a single smoke could get you a loaf of bread if you were desperate.

It wasn't organized or sanctioned. It was neighbors, soldiers, and shopkeepers making do. And while governments debated recovery plans, the underground economy kept people alive.

That's the pattern in every crisis: when money fails or becomes dangerous to use, communities fall back on skills, goods, and trust.

Step One: Take Inventory of Your Assets

You may not think you have much to offer, but look closer.

- **Skills:** Can you cook, fix, sew, repair, code, or teach? All of these can be traded.
- **Goods:** Canned food, fuel, toiletries, batteries, medicine—everyday items turn into currency when they're scarce.

- Space & tools: A spare room, a sewing machine, a pickup truck—all have value in a pinch.

Write down your top three. Those are your barter chips.

Step Two: Build Trade Networks Before You Need Them

Don't wait until shelves are empty.

- Start small: swap a service or item with a neighbor today—just to build the muscle.
- Keep it local: the tighter the circle, the lower the risk. Trade first with people you already trust.
- Think redundancy: build more than one source for critical needs (food, medicine, fuel).

Shadow markets thrive on trust. Build that trust in peacetime.

Step Three: Practice Stealth and Common Sense

Authoritarians often criminalize unofficial exchange. Protect your network.

- Keep records in code. If you must write things down, use nicknames or symbols.
- Don't flaunt scarcity goods. Flashing a stash invites trouble.
- Meet in ordinary places. A park bench, a kitchen table—less obvious than back alleys.

Secrecy doesn't mean paranoia. It means discretion.

Step Four: Mix Old and New Tools

An underground economy isn't frozen in time—it adapts.

- Analog: barter, time swaps, mutual aid.
- Digital: privacy-friendly platforms (like decentralized marketplaces or encrypted group chats).
- Hybrid: cash only, no receipts. Prepaid gift cards. Even cryptocurrencies, if you trust your circle and know the risks.

The principle is the same: reduce traceability, increase resilience.

Lessons from History: The Black Market Kitchen

In Soviet-era Moscow, official shops were empty, but kitchen tables overflowed. Housewives traded sugar for soap, factory workers swapped meat for shoes, and doctors might treat your child in exchange for a bag of oranges. These networks weren't written down, but everyone knew someone who knew someone. The black market wasn't glamorous—it was survival.

Add Your Page to the Ledger

What's one skill, item, or resource you could trade if times got hard? Maybe it's something as simple as cooking a meal, fixing a bike, or sharing seeds. Every trade adds strength to the network.

Chapter 4:

EXIT ROUTES & SAFE HAVENS — WHEN STAYING ISN'T SAFE

Planning go bags, escape lines, and the networks that catch you when you fall.

The Underground Railroad

In the 19th century, enslaved people in the American South risked everything to seek freedom in the North. They didn't do it alone. The Underground Railroad wasn't a single track—it was a web of safe houses, secret codes, and brave guides. A lantern in a window, a quilt on a clothesline, a hymn sung with altered words—all signals pointing to the next stop.

No one made it north without others watching their backs. That's the first lesson of escape: survival isn't just about running fast. It's about knowing where to turn, who to trust, and how to read the signs.

Step One: Know Your Triggers

Exits don't happen in a vacuum. Decide in advance: What would make me leave?

- Arrests or threats in your circle?
- Work drying up, food disappearing?
- State violence too close to home?

Write down your red lines now—so you don't hesitate later.

Step Two: Map Your Routes

- **Local:** Where can you go for a night if things get hot? A neighbor, a friend across town?
- **Regional:** If you had to leave your city, what's your first stop? Who meets you there?
- **Beyond:** Do you have a plan if you need to cross state lines—or borders? Which roads, buses, or trains still run?

Draw your routes on paper. Phones can be tracked, batteries die.

Step Three: Pack for Flight

Keep a “go bag” ready:

- Copies of IDs, critical documents, and some cash.
- Basic meds, water, flashlight, charger.
- A change of clothes, sturdy shoes.
- Small comfort item—because morale matters.

Store it where you can grab it in seconds, not minutes.

Step Four: Build Your Safe Havens

- **Trusted hosts.** Who would take you in without questions? Ask them now, not when the door is breaking down.

- Signal system. How will they know you're coming—or that it's safe to open the door?
- Reciprocity. Safe havens aren't one-way. You might be the host one day.

Lessons from History: Boat People and Border Crossers

After the Vietnam War, thousands fled by boat—families in overcrowded vessels, carrying little more than the clothes they wore. Many perished, but many survived because communities abroad had prepared—church groups, refugee networks, family sponsors waiting in foreign ports. In Central America today, migrants still rely on safe houses called *casas del migrante*, where volunteers offer food, beds, and maps to the next crossing.

The pattern is the same: people survive not by sheer grit, but by stepping into networks ready to catch them.

Go Bag Checklist

Documents & Money

- Copies of IDs (passport, driver's license, birth certificate)
- Copies of medical records, prescriptions, insurance
- Cash in small bills (avoid only carrying cards)

- Emergency contact list (on paper)

Health & Safety

- Prescription meds (1-2 week supply minimum)
- First aid kit (bandages, antiseptic, pain relievers)
- Hand sanitizer & masks
- Water bottle or purification tablets

Communication & Power

- Fully charged power bank
- Charging cables (USB + wall plug)
- Flashlight (with extra batteries)
- Whistle (for signaling)

Clothing & Shelter

- Sturdy shoes
- Weather-appropriate clothes (layers, socks, hat)
- Lightweight blanket or emergency foil blanket
- Poncho or rain gear

Food & Basics

- High-energy snacks (nuts, bars, dried fruit)
- Small multipurpose tool or pocketknife
- Matches or lighter in waterproof container

Morale & Extras

- Small comfort item (family photo, notebook, book)

- Extra glasses/contacts
- Keys (house, car, safe deposit box)

Add Your Page to the Ledger

What would go in your go bag? Who in your circle could be a safe haven—or needs one?

Chapter 5:

PSYCHOLOGICAL ARMOR — RESISTING FEAR, OUTLASTING TYRANTS

When we lose our fear, they lose their power.

The Weapon of Fear

Authoritarians know they can't police everyone, everywhere, all the time. So they lean on fear. Fear of losing your job. Fear of your neighbor reporting you. Fear of the knock on the door at midnight. Fear makes people censor themselves before the state even has to.

But history shows that fear doesn't have to rule us. From the letters Václav Havel wrote in prison, to the songs sung in the streets of Selma, to the whispered prayers of Chilean mothers banging pots in protest—ordinary people have found ways to armor their minds against despair.

Step One: Name the Fear

Fear thrives in the dark. Say it out loud: *"I'm afraid of losing my job. I'm afraid they'll target my family."* Naming it makes it smaller. Share it with someone you trust, and it shrinks again.

Step Two: Anchor to Rituals

Rituals keep you steady when the world tilts.

- Morning walks, no phone.
- Lighting a candle before you write or pray.
- Weekly dinners with friends where politics isn't the only topic.

It doesn't matter what the ritual is. What matters is that you choose it—and repeat it—so your nervous system remembers: *I have control here.*

Step Three: Make Meaning

Fear corrodes when life feels empty. Meaning fills the cracks.

- Keep a journal, even just a line a day.
- Learn a skill you can share.
- Teach, mentor, pass along what you know.

Resisting isn't just what you fight against. It's what you build for.

Step Four: Train for Endurance

The grind is long. Hope isn't a burst of adrenaline—it's stamina.

- Sleep, water, and food are resistance tools. Starving, exhausted people give up faster.
- Practice small challenges: cold showers, fasting, long hikes. If you can endure discomfort on your terms, you'll endure it better when it's forced.
- Celebrate small wins. Every leaflet passed, every conversation had, every truth spoken counts.

Lessons from History: Singing in the Dark

In 1989, as the Iron Curtain cracked, East Germans gathered in Leipzig for candlelit prayers that turned into protests. The state tried to crush them with fear. Armed police, arrests, intimidation. But when the people sang hymns together, the fear broke. One participant later said: *"We lost our fear, and they lost their power."*

The tyrant's grip depends on your silence. Once fear is gone, so is half their rule.

Add Your Page to the Ledger

What do you do—big or small—to steady yourself when fear creeps in? Your practice might become someone else's lifeline.

This closes our Doomsday Book. Together we've built pages on information security, community resilience, underground economies, exit routes, and now the armor of the mind. The ledger is still open. Keep adding to it.
